

The WAVE Wireless Instant Notification System

Enhance Campus Security with the WAVE

“Emergency in Room 301, Business & Technology Building!”

System Highlights:

- Transmits unique, detailed messages to all hand-held radios and base stations in the radio network
- Alarms can also be sent as emails or text messages
- Messages are easily added or changed
- Available with a wide variety of sensors including panic buttons, tilt switches, trip beams, temperature sensors, door/window contacts and motion detectors
- Can be integrated with other security systems
- Compatible with VHF, UHF, 800 MHz or any other commercially available frequency
- Battery backup included

In an emergency, when seconds count, the WAVE is the fastest notification system available.

The WAVE automatically broadcasts alarms over your radio network as soon as an alarm is triggered.

Officers can react immediately to the situation without any dispatch delay.

Officers are free to patrol the campus and can still respond effectively when needed.

Wireless panic buttons and other sensors can be installed in offices, classrooms, cafeterias, libraries, laboratories, parking lots, sports facilities, etc. throughout the campus.

The WAVE can be integrated with your existing security systems to add value to your overall security solution.

We have over 1,000 satisfied customers nationwide!
