

The WAVE Wireless Instant Notification System

Add Value & Save Money With the WAVE

Applications: Emergency Response, Duress Notification and Theft Prevention

Courts / Hospitals / Schools / Commercial Buildings / Parking Lots / Hotels / Museums / Stadiums / Malls / Correctional Facilities / Airports

Portable units for:

Police Surveillance / Fairs / Public Events / Construction Sites / VIP Protection

Panic Buttons, Door/Window Switches, PIR Motion Detectors, Tilt Sensors or other Wireless Sensors

Instant Notification with Specific Message to Security or Law Enforcement Radios or Push-to-talk Phones

The WAVE panel transmits up to 128 unique, detailed, customized audio messages which are easily recorded by users. It has 8 input relays and 6 output relays which can be assigned to zones to trigger sirens, lights, cameras, etc. The WAVE can also be integrated with other security systems that output RS232 data streams.

The WAVE reduces the number of security officers needed to protect a facility or an event. Wireless sensors take the place of guards at vulnerable locations. As soon as an incident occurs, whether it is a panic button being pressed or a motion detector sensing unauthorized access, the officers responsible for responding to it are instantly notified over their radios. This eliminates the need for a third party monitoring service and improves the productivity of all first responders.

The WAVE allows officers to provide better coverage of a facility. Even while patrolling, officers are kept aware of unauthorized access or other emergencies in real time as they occur. This dramatically improves response times while keeping the number of officers needed to provide full coverage to a minimum.

The WAVE adds value to the radio network and other security systems that are already installed at your facility by adding the radio alert functionality to them. The WAVE can adapt to your needs as circumstances change. It is easy to add or change sensors at any time.
