

The WAVE Wireless Instant Notification System

Momentary Mushroom Button

SecureTech Systems has added a weatherproof mushroom button to its range of wireless sensors for the WAVE instant notification system.

When the button is pressed, a message is instantly transmitted over your radio network specifying the location of the emergency.

The WAVE system is ideal for facilities and campuses which are covered by radio networks.

The button is completely wireless and can be surface mounted. This significantly reduces the costs normally associated with installing emergency buttons.

The buttons are suitable for a wide range of applications. They can be used where high visibility of an emergency button is important, for example, in low light or high traffic areas such as stairwells and parking lots.

The buttons can also be integrated with other security systems such as two-way call boxes and CCTV systems.

FEATURES

- Compatible with the WAVE instant notification system.
- Available in red or blue.
- Station housing molded of super tough, UV-stabilized polycarbonate.
- Unique, curved design helps protect against accidental activation.
- Optional weatherproof housing.
- UL Listed to U.S. and Canadian safety standards.
