

The WAVE Wireless Instant Notification System

Integrate the WAVE

We have over 1,000 satisfied customers nationwide!

817 869 0569

The WAVE lets security personnel, local law enforcement or maintenance personnel react immediately to an emergency without dispatch delay.

The WAVE can be integrated into other security or building automation systems several different ways:

- Wireless universal transmitters can be attached to the control panels or sensors of another system.
- Systems can be hardwired into the WAVE through dry contacts—both input and output contacts are available.
- Systems which have output/input of RS-232 Ascii data streams can be connected to the WAVE through a UART card.

The WAVE is compatible with any radio frequency including UHF, VHF, 800MHz, 900MHz and digital frequencies. The WAVE is also compatible with push-to-talk phones.

SecureTech can supply radios along with an FCC registered frequency for facilities that do not have radio networks in place.
