

The WAVE Wireless Instant Notification System

Wireless Protection throughout the Hospital Campus

“Emergency in the Psychiatric Ward!”

The WAVE is flexible and cost effective. When wireless sensors are triggered, it transmits a pre-recorded alarm over your existing radio network. First responders can react immediately without any dispatch delay.

Wireless panic buttons or door contacts can be installed easily in reception areas, where cash is collected, or other locations such as clinics, psychiatric wards, emergency rooms, medical records storage areas and pharmacies.

The WAVE system can be easily integrated into existing security equipment to add value to your overall security solution. For example, infant abduction systems that send alarms to a nursing station can be integrated with the WAVE to send detailed alarms to security officers as well.

Add wireless panic buttons to your security system and get instant, pinpointed notification of an emergency

System Features:

- Transmits unique, detailed messages to all hand-held radios and base stations in the radio network
- Messages are easily added or changed by end users
- Includes 8 input relays and 6 output relays which can trigger other devices such as strobes and sirens
- Can send emails and/or text messages
- Compatible with a wide variety of sensors, including panic buttons, tilt switches, door/window contacts and motion detectors
- Sensors can be scheduled to be on or off during specified hours based on a customized schedule
- Compatible with VHF, UHF, 800 MHz or any other commercially available frequency
- Battery backup included
- Two year warranty included with all WAVE systems
