

Wireless Intelligent Pendants

Small and designed to be worn around the neck or on a belt clip, the intelligent pendant provides a means of summoning aid with a simple button push. When the personal alarm button is pressed, a message is broadcast over your radio network and sent to pagers providing first responders with information about the location of the emergency. Intelligent pendants can also be configured as man-down or no-response devices. An acknowledgement can be sent back to the pendant indicating that help is on the way. A reset button on the pendant or pager must be pressed to confirm that the alarm has been answered. The pendants are fully supervised to ensure reliability.

Key Features

- LED flashes with all transmissions, ensuring operation at a glance
- Easy single-button activation
- Two-way communication for acknowledgement of alarms
- Fully supervised

Technical Specs

Dimensions:	2.5 x 1.6 x 0.5"
Weight:	1.6 oz
Operating Environment:	32° to 140°F up to 90% relative humidity (non condensing)
Battery:	Standard AAA Cell Battery
