

WAVE System Specifications

Wireless Intelligent Pagers

This four line alphanumeric display pager will automatically receive alerts from intelligent pendants providing location and identity. The pager can be used to acknowledge receipt of an alarm from a pendant and signal that help is on the way. The pager can also be used for routine messages and includes message acknowledgement. The built-in panic button allows personnel to summon additional aid with a simple button press. Pagers come with a belt clip and are also available with snatch cords.

Key Features

- LED flashes with all transmissions, ensuring operation at a glance
- Easy single-button activation
- Two-way communication for acknowledgement of alarms
