

The WAVE Wireless Instant Notification System

Protect People and Property at Remote Locations with the WAVE

“Emergency in the Visitor’s Center”

Personnel and assets in remote locations are vulnerable to attack and often have limited means of calling for help.

With the WAVE officers are free to patrol the park grounds, but are able to respond effectively to an emergency at any of the park’s buildings.

The WAVE is flexible and cost effective. When wireless sensors are triggered, it transmits a pre-recorded alarm over your existing radio network. First responders can react immediately without any dispatch delay.

Wireless panic buttons can be installed easily at reception areas, where cash is collected or in psychiatric wards, emergency rooms, medical records storage areas, pharmacies, etc.

The WAVE system can be easily integrated into existing security equipment to add value to your overall security solution.

System Features:

- Transmits up to 125 unique, detailed, customized messages to all hand-held radios and base stations in the radio network
- Messages are easily added or changed by end users
- Includes 8 input relays and 6 output relays which can be assigned to zones to trigger other devices
- Can send emails and/or text messages
- Compatible with a wide variety of sensors, including panic buttons, tilt switches, door/window contacts and motion detectors
- Sensors can be scheduled to be on or off during specified hours based on a customized schedule
- Compatible with VHF, UHF, 800 MHz or any other commercially available frequency
- Battery backup included
- Free two year warranty provided with all new systems

There are over 1,000 WAVE satisfied customers nationwide!
