The WAVE Doubles its Range

FORT WORTH, Texas, August 2008 -- SecureTech Systems, the world's leading supplier of instant notification systems that transmit emergency messages directly over radio networks, has introduced a new generation system that more than doubles the range of its wireless sensors.

SecureTech's system, known as the WAVE, provides an efficient and cost-effective way to call for help or protect assets using a completely wireless system. The WAVE is an ideal solution for court houses, schools, hospitals or any other facility where emergency personnel carry two-way radios. The WAVE has been used by police and security personnel across the country for a wide range of applications including protecting judges in courtrooms, material at construction sites and chemicals in tank farms.

When a wireless sensor, like a panic button or motion sensor, is triggered, the WAVE sends a detailed, pre-recorded message over a two-way radio network. Messages are customized by the user to give the precise location and nature of the incident. It is like posting a permanent guard with a radio at the location of the sensor!

The WAVE can also send emails and text messages as a secondary alarm at the same time as the message is transmitted over the radio network. In this way, administrators and other off-site personnel can keep up with events even if they are not directly responding to an incident.

About SecureTech Systems

SecureTech was founded in 1994 and has installed over 1,200 systems in courts, schools, colleges, hospitals, stadiums, parks and other facilities nationwide.
