## **Finally a Locator System that gets an A+ Intelligent Pendants that can Locate with Room Level Accuracy**

FORT WORTH, Texas, October 2009 – SecureTech is proud to announce the launch of a locator module for the WAVE Wireless Instant Notification System. The WAVE Locator uses state-of-the-art technology to locate alarms in any facility, inside or outside, with room level accuracy!

This WAVE Locator is a unique system. A mesh network of wireless repeaters/locators (powered by batteries or solar power) is placed throughout the facility.

Personnel carry or wear intelligent pendants. The pendants are always within reach when assistance is required.

When a panic button or man-down alert is triggered, the repeaters/locators identify where the incident has occurred and notify the control panel.

A detailed message describing the location of the incident is instantly transmitted over your radio network. In addition, the control panel and pagers display the identity of the resident triggering the device being and the location of the incident on a screen.

First responders are automatically and instantly dispatched to the location of the emergency without any dispatch delay. When a first responder acknowledges the alarm, the intelligent pendant will vibrate to notify the person in distress that help is on the way.

### **About SecureTech Systems**

SecureTech was founded in 1994 and has installed over 1,200 systems in courts, schools, colleges, hospitals, stadiums, parks and other facilities.
