## **Homeless Shelter uses the WAVE to Protect Staff**

FORT WORTH, Texas, November, 2009 – A homeless shelter has made use of the WAVE instant notification system to provide staff with panic buttons.

When pressed, the panic buttons transmit a detailed alarm over the shelter's radio network indicating the location of the emergency. The WAVE is also integrated with the shelter's access control system which goes into lockdown when an alarm is triggered.

This homeless shelter system is just another example of how the WAVE technology can be applied in wide variety of situations to improve staff safety and add value to existing security systems.

### **About SecureTech Systems**

SecureTech is the world's leading supplier of instant notification systems that automate dispatch by transmitting alarms directly over radio networks.

SecureTech was founded in 1994 and has installed over 1,200 systems in all kinds of facilities across the United States and Canada.
