

### **Repeater Locator with Integrated Panic Button**

This wireless repeater locator establishes the locations that can be reported over the WAVE Locator system. It receives input from the intelligent buttons and transmits information to the WAVE Locator module. In addition, an integrated panic button allows for alarms to be raised at the repeater. Unlike most other wireless systems, these repeater locators can provide room level accuracy for location. They are perfect for large multi-floor facilities. This repeater locator is completely wireless. It does not even need an electrical socket for power. It is powered entirely by integrated batteries.

### **Key Features**

- No wires needed
- No programming needed
- Self configuring

### **Technical Specs**

Dimensions:	3.25 x 3.75 x 1.5"
Weight:	15 oz
Power Requirements:	2 Standard D Cells
Operating Environment:	32° to 140°F up to 90% relative humidity (non condensing)
