

# The WAVE Wireless Instant Notification System

## WAVE Locator for the Senior Market

### System Features:

- Transmits detailed, customized messages to all hand-held radios
- Proprietary two-way pagers are available with the system
- Messages are easily added or changed
- Mobile devices are easy to configure from the control panel as panic buttons, man-down and/or no-response devices
- Fall-alert devices vibrate and beep before an alarm is triggered to avoid accidental activation
- Fall-alert devices continue to beep after activation so they are easier to find
- System can send emails and text messages or make phone calls
- All devices are fully supervised
- System can be integrated with LED signs or other external devices such as strobe lights
- Alarm logs, reports and audit trail can be accessed through any PC using a web browser
- Fixed pull stations and other sensors can also be incorporated into the system
- System can be configured to track mobile devices and set off an alarm when specified devices get within range of specified repeaters/locators to control access
- Alarms will continue to repeat at specified intervals until acknowledged by a responder
- Alarms can be acknowledged at the device originating the alarm, the control panel or a pager
- System can be configured so that mobile devices beep or vibrate when an alarm is acknowledged by a responder
- Battery back-up included with all systems
- One year warranty provided with all new systems

The WAVE Locator uses intelligent buttons and repeater/locators to provide the safest environment for your facility. Because seconds count, now you can have the peace of mind of knowing instantly when your residents need help and where they are. The WAVE Locator system can locate mobile pendants within a facility or anywhere on a campus with room level accuracy.

Our intelligent mobile pendants are tracked by a central hub as they move through a mesh network of repeaters/locators installed at your facility. When an emergency occurs, an alarm is instantly broadcast over your radios and pagers notifying caregivers immediately of the detailed location of the emergency.

This WAVE Locator is a unique system. Our wireless repeaters/locators are powered by batteries or solar power. This makes it easier to install and reconfigure.

An acknowledgement that an alarm has been received by caregivers can be sent to our intelligent mobile pendants so that residents can feel assured that help is on the way.

The WAVE Locator also supports wireless fixed position pull stations and other sensors. Additional sensors can be added to the system at any time.

***Ideal for Assisted Living, Independent Living, CCRC and Memory Care Facilities***
