

# The WAVE Wireless Instant Notification System

## Lone Worker / Man-Down and Personal Security

### System Features:

- Transmits detailed, customized messages to all hand-held radios
- Proprietary two-way pagers are available with the system
- Messages are easily added or changed
- Mobile devices are easy to configure from the control panel as panic buttons, man-down and/or no-movement devices
- Intelligent buttons vibrate and beep before a man-down alarm is triggered to avoid accidental activation
- Buttons continue to beep after man-down activation so workers are easier to find
- System can send emails and text messages or make phone calls
- All devices are fully supervised
- System can be integrated with LED signs or other external devices such as strobe lights
- Alarm logs, reports and audit trails can be accessed through any PC using a web browser
- Fixed panic buttons and other sensors can be incorporated into the system
- System can be configured to track mobile devices and set off an alarm when specified devices get within range of specified repeaters/locators to control access
- Alarms will continue to repeat at specified intervals until acknowledged by a first responder
- Alarms can be acknowledged at the device originating the alarm, the control panel or a pager
- Battery back-up included with all systems
- One-year warranty provided with all new systems

The WAVE Locator is a unique, state-of-the-art system using intelligent buttons and repeaters/locators to provide the safest environment in any industry and application. Because seconds count when there is an emergency, the WAVE Locator gives you the peace of mind of knowing instantly when someone at your facility needs help.

The WAVE Locator can send panic alarms, man-down alerts, no-movement alarms and provide location information when there is an emergency. The WAVE Locator can locate individuals within a facility or anywhere on a campus with room level accuracy.

Our intelligent mobile buttons can be worn as pendants or on belt clips. They are tracked by a central hub as they move through a mesh network of repeaters/locators installed at your facility. When an emergency occurs, an alarm is instantly broadcast over your radios and pagers notifying first responders immediately of the detailed location of the emergency.

An acknowledgement that an alarm has been received can be sent to our intelligent mobile pendants so that workers can feel assured that help is on the way.

This WAVE Locator is a unique system. Our wireless repeaters/locators are powered by batteries or solar power. This makes it easy to install and reconfigure the system.

*Upgrade your facility's security solution to include the state-of-the-art personal protection system*
